

REACT JS

LECTURE 3

By Mona Soliman

AGENDA

- Recap last lecture
- Routing
- Axios
- API Integration
- Questions!

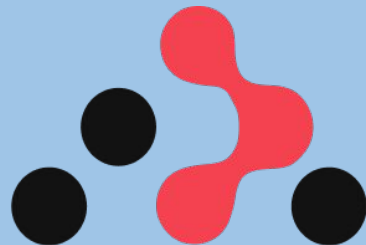

ROUTING

Client side routing allows your app to update the URL from a link click without making another request for another document from the server. Instead, your app can immediately render some new UI and make data requests with `fetch` to update the page with new information.

This enables faster user experiences because the browser doesn't need to request an entirely new document or re-evaluate CSS and JavaScript assets for the next page. It also enables more dynamic user experiences with things like animation.

to install it first :

```
npm install react-router
```

React Router

ROUTING HOOKS

React Router ships with a few hooks that let you access the state of the router and perform navigation from inside your components.

- `useParams()`
- `useSearchParams()`
- `useNavigate()`
- `useLoaderData()`
- `useActionData()`

Search for =>>>> `useNavigation()`

Axios

Axios is a simple promise based HTTP client for the browser and node.js. Axios provides a simple to use library in a small package with a very extensible interface.

Installation :
npm install axios

You can create a new **instance of axios** with a custom config:

```
const instance = axios.create({  
  
  baseURL: 'https://some-domain.com/api/',  
  timeout: 1000,  
  headers: {'X-Custom-Header': 'foobar'}  
});
```

NOTIFICATION LIBRARIES

- React-toastify
- React Hot Toast
- notistack

LAB

LAB

1. Add navbar with link for different pages as shown in task:

Create account in the movie db website:

<https://www.themoviedb.org/login>

2. Get movies list using API:

https://api.themoviedb.org/3/movie/popular?api_key={apiKey}

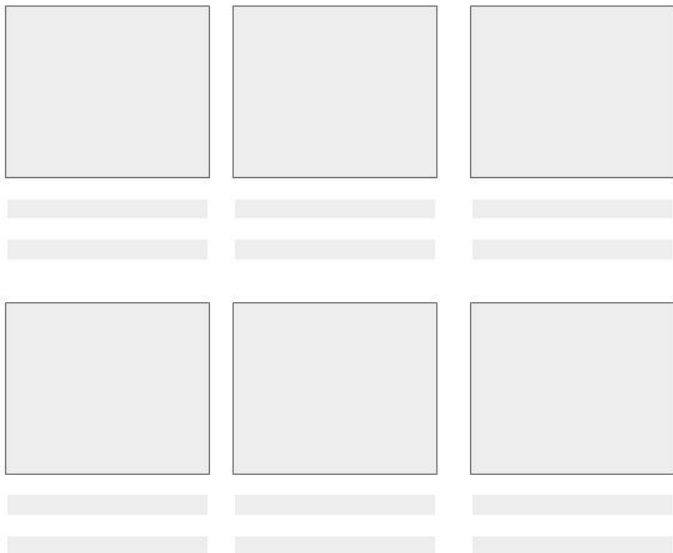

3. Using dynamic routes get movie details data using API:

https://api.themoviedb.org/3/movie/880006?api_key={api Key}

Where 880009 is the movie ID

Movies favorites

login register

LAB

4. Handle pagination by send query params to url called page :

https://api.themoviedb.org/3/movie/popular?api_key=7a1c16ea3c361a4d3cc53eb70ef8268&page=4

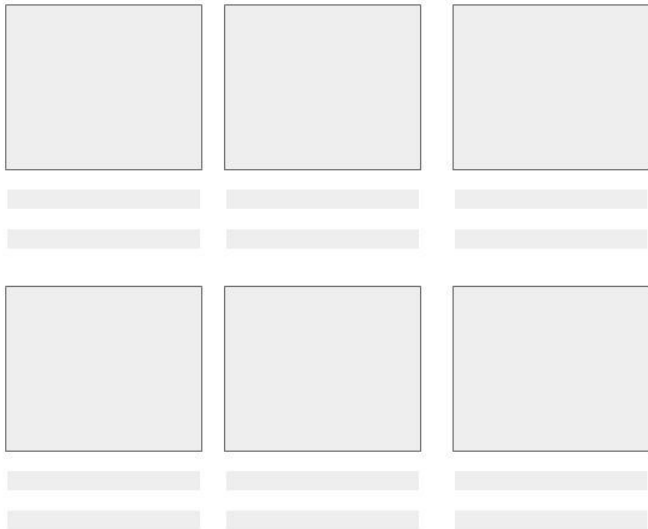

5. Apply search for movies using the following api: **[Bonus]**

https://api.themoviedb.org/3/search/movie?api_key=7a1c16ea3c361a4d3cc53eb70ef8268&query={MovieName}

6. Make Favorites route a guarded route **[Bonus]**

Movies favorites

login

prev

next

LAB

For images please add static url part
to img src before poster_path key

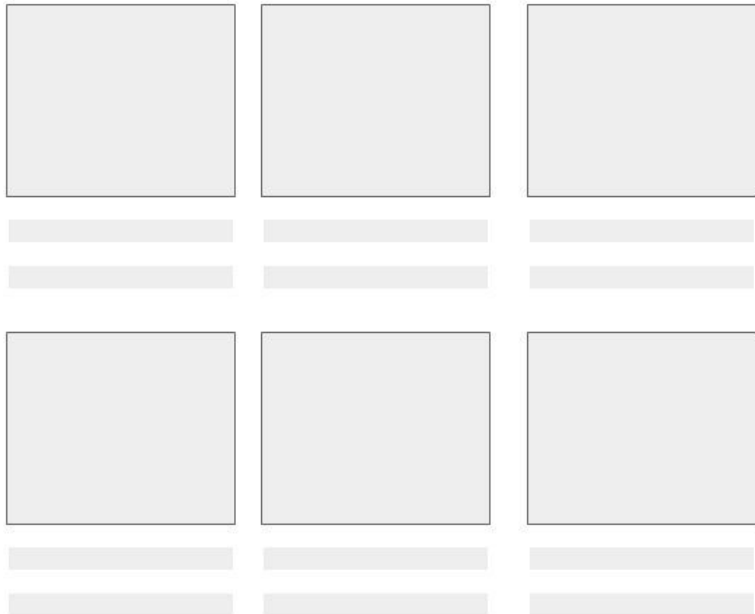

[https://image.tmdb.org/t/p/w500/\\${poster_path}](https://image.tmdb.org/t/p/w500/${poster_path})

Movies DB link:

<https://developers.themoviedb.org/3/movies/get-popular-movies>

Movies favorites

login
